PROFESSIONAL SUMMARY

Software engineering student with hands-on experience building API-integrated, database-backed systems using TypeScript, Node.js, Express.js, PostgreSQL, and MongoDB. Built OAuth and workflow-automation solutions with validation and failure handling, and delivered merged contributions to CNCF and Sugar Labs projects. Interested in building dependable integration systems for high-stakes operational workflows.

EDUCATION

B.Tech in Computer Science (AI & ML)

2025 – 2029

Medhavi Skills University (Polaris School of Technology)

SGPA: 8.31

PROJECTS

OpenTrack (Open Source Contribution Tracker)

React, Node.js, Express.js, PostgreSQL

[View Project](#)

- Built a full-stack contribution-tracking platform with REST APIs that aggregate, process, and serve GitHub contribution data.
- Implemented GitHub OAuth authentication, session management, PostgreSQL data models, and frontend-backend state synchronization.

LeadFlow (AI Lead Qualification and Routing Workflow)

n8n, Node.js, Google Sheets, REST APIs

[View Project](#)

- Built a configurable workflow that normalizes lead intake, enriches company data, applies hybrid rule and AI qualification, and routes outcomes for follow-up.
- Added data validation, fail-closed fallbacks, and manual-review paths to improve the reliability and safety of automated decisions.

GitAnalyzer (GitHub Analytics Platform)

React, TypeScript, GitHub REST API

[View Project](#)

- Built an analytics application that transforms GitHub repository and commit data into interactive developer and contributor insights.
- Implemented asynchronous API handling, caching, pagination, filtering, loading states, and error states for reliable analysis of large commit datasets.

OPEN SOURCE EXPERIENCE

Open Source Contributor, Harbor CLI (CNCF Ecosystem)

Go

- Delivered 2 merged pull requests to a production Go CLI, improving login flag validation and reducing repeated regular-expression compilation in command workflows.
- Collaborated with maintainers through code reviews, testing, and documentation updates while investigating error-propagation and replication-flow edge cases.

Open Source Contributor, Sugar Labs Music Blocks

JavaScript

- Delivered 9 merged pull requests across rendering, error handling, PDF generation, drag-and-drop feedback, and media-resource management.
- Improved reliability and maintainability by refactoring structured error handling across 25+ files, releasing camera media resources, and deferring canvas redraw work.

SKILLS

Languages: JavaScript, TypeScript, Go, Python, SQL, HTML, CSS

Frontend: React, Tailwind CSS

Backend & Integrations: Node.js, Express.js, REST APIs, OAuth 2.0, Workflow Automation (n8n)

Databases: PostgreSQL, MongoDB

Engineering: Docker, Git, GitHub, Linux, API Integration, Data Validation, Error Handling, Debugging, Testing

ACHIEVEMENTS

- 11 merged open-source pull requests across Harbor CLI (CNCF) and Sugar Labs projects
- Solved 100+ problems on LeetCode and 1600+ problems on CodeChef
- Ranked 2nd in district in Class 12 board examinations and secured 2nd rank in school in Class 10
